

DALA MUZRAEV

SOFTWARE ENGINEER

New York, NY | (347) 474 4162 | dala.muzraev@ohmymail.net | <https://www.linkedin.com/in/dmuz/>

Software Engineer with 7+ years building scalable, **high-load distributed systems** across fintech, e-commerce, and B2B SaaS industries. Expert in **Java**, **Spring Boot**, **Apache Kafka**, and cloud-native solutions on **AWS**, with strong focus on clean code practices. Worked at **Luxoft**, a consulting IT company with clients from **Fortune 500** and **Forbes Global 2000**, including **UBS**, **BMW**, and **Deutsche Bank**.

KEY ACHIEVEMENTS

- Modernized **banking CRM platform** by migrating a monolithic system to **Java/Spring Boot microservices**, improving scalability and reliability for 1M+ users
- Eliminated 80% of manual email processing by automating intake of **100K+** daily corporate emails
- Built **RESTful API** for loan processing with **Bloomberg** integration and **Apache Kafka** messaging, handling 3K+ daily applications with 320ms response time
- Automated **Amazon FBA** workflows by developing an **Amazon Selling Partner API integration**, managing 1K+ monthly shipments and streamlining fulfillment operations

Authorized to work for any U.S. employer without visa sponsorship.

PROFESSIONAL EXPERIENCE

Rubin and Rothman, New York

August 2025 – March 2026

Law firm specializing in financial and legal services

Java Software Engineer

- Migrated legacy **Experian API integration** to **Java/Spring Boot**, improving credit data reliability and accelerating financial decisioning workflows
- Automated processing of **100K+** daily inbound corporate emails by integrating **IMAP** server with **Spring Boot**, **IBM AS400**, and **Apache Kafka**, dramatically reducing manual labor and accelerating operational throughput
- Built from scratch a judicial district data module using **Java**, **Spring Boot**, and **ArcGIS REST API** integration, enabling real-time location data retrieval and reducing client report delivery time while freeing up department resources
- Improved backend document parsing module performance through deep profiling with **VisualVM**, identifying and resolving memory leaks, CPU bottlenecks, and thread contention issues
- Resolved critical production bugs under tight **SLA requirements**, ensuring system stability and minimizing downtime for business-critical debt collection workflows
- **Mentored junior developers** through code reviews, technical guidance, and best practice adoption, contributing to team growth and code quality

Star Hair, New York

September 2023 – July 2025

Warehouse management platform with \$1M+ Amazon operations

Java Software Engineer

- Streamlined warehouse operations building **RESTful APIs** with **Spring Boot** and **PostgreSQL** for **Amazon FBA** operations, tracking 15K+ monthly units across fulfillment centers
- Optimized database performance handling 100K+ daily barcode scans with sub-450ms response times using **Redis** caching and **PostgreSQL** with **JPA/Hibernate** optimization
- Automated FBA workflows developing **Amazon Selling Partner API** integration processing 1K+ monthly shipments
- Enhanced real-time communication implementing **event-driven architecture** with **Apache Kafka** and **WebSockets**, delivering instant notifications to warehouse users
- Established role-based authentication using **Spring Security**, **JWT**, and **OAuth 2.0** across all microservices applications
- Reduced **AWS** infrastructure costs migrating to serverless **Lambda** functions and containerized architecture
- Collaborated with Cloud DevOps team to enhance system performance and ensure seamless integration across cloud environments

Luxoft

August 2020 – April 2023

Global IT consulting company serving **Fortune 500** client

Java Software Engineer - Banking Technology Division

- Migrated a monolithic **banking CRM** serving 1M+ customers to **Java, Spring Boot microservices**, delivering 40+ production services
- Built **RESTful API** with **Spring WebFlux** and **Bloomberg integration** serving 3K daily loan applications
- Built robust microservices communication layer combining **gRPC/Protobuf** for **synchronous binary data transfer** and **Kafka** message queues for reliable event processing
- Enhanced security for 1M+ banking users through complex authentication module using **Spring Security, Keycloak, OAuth 2.0**, and **Active Directory integration**
- Designed **CI/CD pipelines** with **GitLab CI**, automating deployments to **OpenShift** and reducing release cycle
- Worked closely with QA team for rapid incident investigation and efficient bug resolution processes

Eticket4

May 2019 – May 2020

Global ticketing marketplace with 2M+ customers

Java Developer

- Designed and developed **REST APIs** using **Spring Framework**, enabling smooth ticket booking for 2K concurrent users during peak events.
- Implemented **Spring Data JPA** optimistic locking to manage 10K+ daily booking sessions, eliminating race conditions and ensuring data consistency during high-traffic events
- Reduced daily database queries through **Redis caching**, improving average **API** response time to 85ms and reducing database load
- Integrated **Apple Pay and Google Pay**, streamlining mobile checkout flows and increasing conversion rates for mobile users
- Provided 80% test coverage with comprehensive testing across all applications layers and scenarios, including automated **UI testing** using **Selenium framework** and performance/load testing with **Apache JMeter**

EDUCATION

Bachelor's Degree in Information Technology, KSU

TECHNICAL SKILLS

Java 8/11/17, Spring Framework, Spring Boot, Maven/Gradle, Spring Web, Spring WebFlux, Spring Data JPA, Spring Data Redis, Spring Security, Spring Actuator, Spring Cloud, Spring Integration, Spring Batch, Spring AOP, Spring Cache, Spring Validation, Spring Boot DevTools, JPA/Hibernate, Spring Data JPA, JDBC, Spring Data MongoDB, Spring Data Elasticsearch, Database Optimization, PostgreSQL, MySQL, H2, MongoDB, Redis, Elasticsearch, Apache Kafka
