

Bhagyaraj Sharma Srusti

Senior Java Developer

Atlanta, GA • (470) 549-2647 • sbhagyaraj307@gmail.com • linkedin.com/in/bhagyaraj-sharma-srusti

PROFESSIONAL SUMMARY

Senior Java Developer with 12+ years of hands-on experience designing, building, and scaling enterprise-grade backend systems, microservices, and event-driven distributed architectures across telecom, SaaS analytics, gaming, staffing, and government domains. Deep expertise in **Java 17/21, Spring Boot, Microservices, RESTful APIs, GraphQL, Apache Kafka, AWS (EC2, S3, Lambda), Docker, Kubernetes, Redis, Hibernate/JPA, PostgreSQL, MS SQL, and Oracle**, with a strong track record of delivering high-performance, secure, cloud-native backends.

Early adopter and power user of **AI/LLM-assisted software development** — daily user of **GitHub Copilot and Claude AI in agent mode** to translate JIRA stories into working Spring Boot implementations across multiple files, generate JUnit/Mockito test suites, perform intelligent code reviews, and accelerate debugging. Skilled at applying **prompt engineering and agentic coding workflows** to ship cleaner, faster, more reliable production code in the modern AI-augmented SDLC.

Oracle Certified Professional – Java SE 17 Developer and **AWS Certified Developer – Associate**. Hands-on backend engineer with strong skills in API security (JWT, OAuth2, Spring Security), event-driven architecture (Kafka), caching (Redis), search (Elasticsearch), observability (Splunk, ELK), and CI/CD (Jenkins, GitLab, AWS CodePipeline). Comfortable supporting frontend integration and resolving UI-side issues when needed.

CORE TECHNICAL SKILLS

Languages: Java 8 / 11 / 17 / 21, SQL, JavaScript

Frameworks: Spring Boot, Spring Security, Spring Data JPA, Spring MVC, Hibernate, Struts 1.x / 2.x, Angular

Microservices & APIs: RESTful APIs, SOAP, GraphQL, Microservices Architecture, Event-Driven Architecture, API Gateway, JWT, OAuth2

Messaging & Streaming: Apache Kafka (Producers, Consumers, Consumer Groups, Idempotent Consumers, Partitioning)

Cloud & DevOps: AWS (EC2, S3, Lambda, IAM, CodePipeline, SDK for Java), Docker, Kubernetes (exposure), Jenkins, GitLab CI/CD, Maven, Azure DevOps, Tomcat, WebSphere

Databases & Caching: PostgreSQL, Oracle 10g / 19c, MySQL, MS SQL Server, Redis, Elasticsearch

Front-End (Supporting): JavaScript, jQuery, AJAX, HTML5, CSS3, Bootstrap, JSP — written hands-on with Struts-based applications; Angular (issue triage and minor fixes on existing apps)

AI / LLM Engineering: GitHub Copilot, Claude AI (agent mode), Generative AI, Prompt Engineering, Agentic Coding Workflows, JIRA Story-to-Code Translation, AI-Assisted Code Generation, AI-Assisted Unit Testing, Intelligent Code Review, AI-Enhanced SDLC

Testing & Quality: JUnit, Mockito, AI-Assisted Test Generation, Peer Code Reviews, TDD principles

Observability: Splunk, Log4j, ELK Stack (Elasticsearch, Logstash, Kibana)

Tools & IDEs: IntelliJ IDEA, Visual Studio Code, Eclipse, STS, MyEclipse, JIRA, Bitbucket, SourceTree, GitLab, GitHub, SVN

Data & BI: Power BI REST API integration, data visualization, analytics dashboards

PROFESSIONAL EXPERIENCE

Senior Java Developer

T-Mobile (Contract via Sparity, Inc.) | Atlanta, GA | Oct 2024 – Present

TFB Order Management — Business customer order platform handling BYOD, SIM/eSIM activation, device upgrades, and new device provisioning.

- Designed and developed Java 17 / Spring Boot microservices powering core order management workflows for T-Mobile's business (TFB) customers, supporting BYOD, SIM/eSIM activation, device upgrades, and new device orders.
- Led and mentored a 20-member offshore engineering team — directing technical design decisions, code reviews, and performance audits — while remaining hands-on with daily Java microservice development.

- Architected secure RESTful APIs with JWT-based authentication and Spring Security for internal and external service communication, hardening the platform against unauthorized access.
- Engineered event-driven order processing on Apache Kafka, implementing idempotent consumer logic to safely handle at-least-once delivery semantics during retries, consumer rebalances, and failure recovery — eliminating duplicate order processing.
- Integrated GraphQL endpoints for flexible, frontend-driven querying of order and customer data, reducing over-fetching and improving end-user response times.
- Implemented Redis-backed caching using Spring Data JPA, reducing database load and improving p95 latency for high-traffic order lookup and status APIs.
- Engineered scalable file storage with AWS S3, building secure upload/download flows for order artifacts with encryption and signed URLs to ensure data integrity and accessibility.
- Built and maintained CI/CD pipelines using AWS CodePipeline and Jenkins, enabling automated, reliable deployments of Spring Boot microservices to cloud environments.
- Triaged production incidents using Splunk — performing log correlation and root-cause analysis, shipping tested hotfixes, and supporting on-call rotations.
- Translated T-Mobile JIRA stories into working Spring Boot microservice code by guiding Claude AI (agent mode) in VS Code through multi-file implementations — generating entities, JPA repositories, service logic, REST controllers, and JUnit tests in a single supervised session, then reviewing and refining for production deployment.
- Leveraged GitHub Copilot in IntelliJ IDEA to accelerate Spring Boot microservice development, reduce boilerplate, and shorten feature turnaround time.
- Used AI-assisted code generation to author JUnit test cases for service and controller layers, improving overall test coverage and reducing manual testing effort.
- Performed AI-assisted self-reviews before commits and used LLM tools to review offshore pull requests — validating logic, surfacing risks, and providing constructive feedback at scale.

Tech Stack: Java 17, Spring Boot, Spring Security, Hibernate, RESTful APIs, SOAP, GraphQL, Microservices, Apache Kafka, Redis, AWS (EC2, S3, CodePipeline), Maven, GitLab CI/CD, Splunk, JIRA, Tomcat, IntelliJ IDEA, VS Code, GitHub Copilot, Claude AI.

Senior Java Developer

Sparity Soft Technologies Pvt. Ltd. | Hyderabad, India | Apr 2023 – Sept 2024

Product: Smart Analytics Tool (SAT) — Self-service, multi-tenant risk analytics SaaS platform with module-based dashboards.

- Architected and built core backend services for SAT, a self-service risk analytics SaaS enabling enterprise users to upload data, run analytics, and explore risk visualization dashboards across multiple business processes.
- Led and mentored the engineering team on the SAT platform — driving technical design, code reviews, AWS adoption, and Spring Boot best practices — while remaining hands-on with backend microservice development.
- Built scalable Spring Boot microservices exposing RESTful and GraphQL APIs, secured with Spring Security and role-based access control.
- Modeled end-to-end MS SQL database schemas and implemented Spring Data JPA repositories for efficient data persistence, querying, and reporting.
- Integrated Microsoft Power BI REST APIs to programmatically create workspaces, datasets, and reports, and to push real-time application data into Power BI for executive-facing dashboards.
- Re-architected non-critical synchronous REST calls into Kafka event streams, significantly improving order/data processing throughput, decoupling services, and increasing system resilience.
- Configured Redis caching to reduce repeated database hits and accelerate response times on heavy analytics endpoints.
- Built CI/CD pipelines using AWS CodePipeline, Jenkins, and Azure DevOps to automate build, test, and deployment of Java microservices.
- Automated serverless workflows using AWS Lambda triggered by S3 event notifications, processing uploaded analytics files asynchronously and at scale.
- Integrated AWS services (S3, Lambda, IAM) with Spring Boot applications using the AWS SDK for Java, building secure file upload/download functionality with data integrity guarantees.
- Deployed and managed Spring Boot microservices on AWS EC2 instances — configured Linux environments, JDK/Tomcat runtimes, networking, security groups, and performed manual rollouts and runtime troubleshooting prior to CI/CD pipeline maturity.

- Containerized Java microservices using Docker and worked with Kubernetes for orchestration in development environments, gaining hands-on exposure to container builds, image management, and pod-based deployments.

Tech Stack: Java, Spring Boot, Spring Security, RESTful APIs, GraphQL, Microservices, Hibernate, JPA, Apache Kafka, Redis, MS SQL, AWS (EC2, S3, Lambda, CodePipeline), AWS SDK for Java, Docker, Kubernetes, Power BI, Maven, GitLab, JIRA, Azure DevOps, Tomcat.

Senior Java Developer

North Alley | Hyderabad, India | Dec 2022 – Mar 2023

Product: National TOTE — Premium sports wagering platform powering sportsbooks, self-service kiosks, mobile/desktop POS terminals, and white-label sports software.

- Built Java / Spring Boot microservices for National TOTE, supporting sportsbook operations, kiosks, and POS terminals for horse racing and gaming clients.
- Led end-to-end database migration from MS SQL to PostgreSQL — schema redesign, data migration scripts, query tuning, and validation under high-volume wagering workloads.
- Built RESTful microservices powering Angular-based wagering UIs across mobile and desktop, focusing on low-latency, high-throughput backend response for time-sensitive betting operations.
- Engineered Kafka-based event streams for near-real-time wagering events, downstream analytics, and inter-service communication.
- Built CI/CD pipelines using AWS CodePipeline, Jenkins, and Azure DevOps, standardizing automated deployments of Java microservices.
- Automated cloud operations using AWS Lambda and other serverless services; integrated AWS SDK for Java for programmatic access to AWS resources.
- Created reusable architecture components and shared libraries leveraged across multiple wagering products.

Tech Stack: Java, Spring Boot, RESTful APIs, Microservices, Hibernate, Maven, Angular, HTML5, CSS3, JavaScript, jQuery, Bootstrap, MS SQL, PostgreSQL, Apache Kafka, AWS, Git, CI/CD, Azure DevOps.

Senior Java Developer

W3 Global | Hyderabad, India | Dec 2021 – Dec 2022

Product: Talent Pathway — SaaS-based staffing and applicant tracking platform with advanced candidate identification and management.

- Engineered backend microservices for Talent Pathway, a SaaS staffing platform extending traditional ATS capabilities with flexible candidate identification, tracking, and management.
- Built RESTful APIs using Spring Boot and Hibernate to power the Angular front-end, enabling fast, flexible candidate search and recruiter workflows.
- Integrated Elasticsearch to power high-performance candidate and job search across large data sets, dramatically improving recruiter search speed.
- Built secure file upload/download flows using AWS S3 for resumes and candidate documents, ensuring data integrity and access control.
- Built CI/CD pipelines using AWS CodePipeline and Jenkins to automate microservice deployments to cloud environments.
- Used the ELK Stack (Elasticsearch, Logstash, Kibana) for centralized logging and observability across services, enabling faster issue diagnosis.

Tech Stack: Java, Spring Boot, RESTful APIs, Microservices, Maven, Hibernate, Angular, Elasticsearch, AWS S3, HTML5, CSS3, JSP, Bootstrap, jQuery, JavaScript, Bitbucket, JIRA, ELK Stack.

Senior Java Developer

CGG (Centre for Good Governance) | Hyderabad, India | Jun 2018 – Dec 2021

Product: TSBIE — Telangana State Board of Intermediate Education platform handling admissions, fee payments, hall tickets, and results processing for the state of Telangana.

- Built backend software modules for TSBIE, including Admissions, Fee Payment, Centre Constitution, Ethics & Environments, Practicals, Hall Tickets, Results Processing, RVRC, and Supplementary Examinations.
- Built backend services using Spring Boot, Struts 1.1, Hibernate, and PostgreSQL, supporting large-scale state-wide student data processing.
- Implemented Hall Ticket generation and Results Processing services for state-wide examinations, ensuring data accuracy, reliability, and on-time delivery during peak load windows.

- Modeled and maintained PostgreSQL schemas for efficient data handling across high-traffic admission and examination cycles.
- Collaborated with government stakeholders to gather requirements and translate them into robust backend modules; provided ongoing technical support and issue resolution.

Tech Stack: Java, Spring Boot, Struts 1.1, Maven, Hibernate, PostgreSQL, HTML5, CSS3, JSP, Bootstrap, jQuery, Angular, JavaScript, SVN, GitLab, Tomcat.

Senior Java Developer

CGG (Centre for Good Governance) | Hyderabad, India | Sep 2013 – Jun 2018

Product: *TSPSC* — Telangana State Public Service Commission recruitment platform serving 30L+ candidate registrations across 150+ notifications, placing 27K+ employees and generating significant public-sector revenue.

- Designed and built core Java backend services for the TSPSC recruitment platform — online applications, candidate-to-center allocation, key objection handling, web options, and final selection list generation.
- Architected and developed solutions using Struts 1.1, Spring Boot, Hibernate, and Oracle 10g, handling massive concurrent traffic during national-scale notification cycles.
- Built the eTaal real-time notification dashboard, exposing live counts of applications, fee payments, and other metrics via SOAP web services published at regular intervals to government dashboards.
- Built a non-Aadhaar-based two-factor biometric authentication module to secure confidential workflows such as Results Processing.
- Rapidly delivered the COVID-era Appointment Screens application — a three-phase candidate screening workflow (registration, panel allocation, interview guidance) integrating a mobile app for registration and web services for tokenization and panel orchestration.
- Contributed to UI delivery using Bootstrap, jQuery, and JavaScript on Struts-based applications, and supported Angular front-ends with issue triage and minor fixes; mentored junior developers on Java best practices, problem-solving, and testing.

Tech Stack: Java, Struts 1.1, Spring Boot, Maven, Hibernate, Oracle 10g, HTML5, CSS3, JSP, Bootstrap, jQuery, Angular, JavaScript, SOAP, SVN, GitLab, Tomcat.

AI-ASSISTED ENGINEERING

- Translated JIRA user stories and acceptance criteria into working Spring Boot code by applying structured prompt engineering to decompose stories into implementation tasks, then driving Claude AI in agent mode (via the VS Code extension) to generate entity classes, JPA repositories, service layers, REST controllers, and JUnit tests across multiple files in a single supervised session.
- Used Claude AI in agent mode for autonomous multi-file edits — feature implementations, cross-cutting refactors, and API contract updates — supervising the agent's changes, validating against business logic, and shipping production-grade pull requests faster than traditional development cycles.
- Integrated GitHub Copilot (in IntelliJ IDEA) and Claude AI (in VS Code) into daily Java and Spring Boot development workflows, accelerating feature delivery and significantly reducing boilerplate across microservices.
- Used LLM tools (GitHub Copilot, Claude) to author comprehensive JUnit and Mockito test suites and to perform AI-assisted self-review of code and offshore pull requests — raising unit test coverage, surfacing defects, and enforcing coding standards earlier in the SDLC.
- Leveraged Generative AI for log analysis, exception triage, and root-cause investigation, accelerating resolution of production incidents during on-call rotations.
- Coached offshore engineers on responsible adoption of AI developer tools, prompt patterns, agent-mode workflows, and AI-augmented peer review — standardizing how the team uses GitHub Copilot and Claude AI across feature work.

EDUCATION & CERTIFICATIONS

- **Bachelor of Computer Science** — Indian Institution of Engineers (IIE), New Delhi (Distance Education), 2013 – 2016.
- **Oracle Certified Professional – Java SE 17 Developer** — Credential ID: 100730135OCPJSE17.
- **AWS Certified Developer – Associate** — Credential ID: 483553527.
