EDUCATION

Master's in information technology, University of Central Missouri — 2018
Bachelor's in information technology, GRIET — 2016

PROFESSIONAL SUMMARY

Full Stack Developer with 9+ years of experience designing and implementing high-performance web applications and micro services. Proficient in Java, React, Vue, and AWS, with a strong focus on scalable architecture, optimized performance, and seamless user experience. Experienced in Agile delivery, leveraging TDD, Automated, functional, and integration testing to ensure reliable and high-quality software releases. Skilled in building cloud-native, event-driven systems and integrating AI-enabled workflows to enhance automation and large-scale data processing.

TECHNICAL SKILLS

- **Languages and Frameworks:** Java, Python, JavaScript (ES6+), TypeScript, SQL, React.js, Angular, Vue.js, HTML5, CSS3, Redux, Spring Boot, Microservices, REST APIs, GraphQL, Hibernate/JPA
- **Messaging & Streaming:** Apache Kafka, Event-Driven Architecture, ActiveMQ
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, API Gateway, SQS, SNS), Docker, Kubernetes, CI/CD (Jenkins, GitHub Actions)
- **Databases:** Oracle, MySQL, SQL Server, DynamoDB, MongoDB, Cassandra
- **Testing:** JUnit, Mockito, Jest, Cypress, Mocha
- **Observability & Tools:** Prometheus, Grafana, Open Observe, CloudWatch, Postman, Git
- **AI Integration:** LLM API integration, prompt design, AI-enabled backend workflows

PROFESSIONAL EXPERIENCE

Client: Walmart | Role: Java Full Stack Developer

April 2025 - Present

Description: Built full-stack applications using Kafka-based microservices (Java, Spring Boot) and modern UI frameworks for product validation, data enrichment, image processing, and data publishing.

Responsibilities:

- Built event-driven **Kafka microservices (Java, Spring Boot)** on Walmart Cloud (WCNP) powering scalable product setup and asset processing pipelines.
- Developed an **AI-powered chatbot for internal asset management tools**, enabling intelligent query handling and workflow automation.
- Integrated AI-driven processing into microservices to enhance data enrichment, classification, and decisioning workflows.
- Developed **React-based UI components** for internal tools to manage and visualize product and asset workflows.
- Containerized services using **Docker** and deployed on **Kubernetes**, enabling scalable and resilient microservice orchestration.
- Implemented **automated testing (JUnit, Mockito, contract tests)** ensuring reliability across streaming and REST integrations.
- Optimized performance via **JVM tuning, Java 21 CDS, and HPA-based autoscaling** for Kafka workloads.
- Enabled observability using **Prometheus, Grafana, and internal tools** to monitor consumer lag, failures, and system health.
- Provided **production support**, resolving real-time streaming issues and maintaining high system uptime.

Client: Asure Software | Role: Full Stack Developer

Jan 2022 – March 2025

Description: Asure Software's suite of workforce management tools, the payroll application focuses on simplifying payroll calculations, compliance, and employee payments.

Responsibilities:

- Built responsive UI using React 18 + Tailwind CSS, collaborating with design teams via Figma and ensuring quality with Jest.
- Developed and optimized Node.js (Express) services with GraphQL APIs, improving query efficiency and reducing over-fetching.
- Implemented backend data processing and validation logic, enhancing data accuracy and consistency across payroll workflows.
- Deployed and scaled applications on Azure (App Service, Functions, Storage), supporting serverless and cloud-native workloads.
- Automated infrastructure provisioning using ARM templates, improving deployment consistency and reducing manual effort.
- Implemented Azure AD-based authentication for secure, role-based access across environments.

Client: Care First | Role: Full Stack Java Developer**July 2020 – Dec 2021**

Description: Built a customer service platform for managing insurance policies, claims, and member benefits, enabling efficient record updates and streamlined CSR workflows.

Responsibilities:

- Built RESTful services with Java, Kafka, Spring Boot and MongoDB, enabling efficient data processing and event-driven workflows.
- Enhanced frontend performance using Next.js SSR, improving load times and SEO for dynamic applications.
- Optimized data access with RDS and Redis (ElastiCache) for low-latency and high-throughput operations.
- Configured Auto Scaling, load balancing, and IAM roles/policies to ensure secure service-to-service access, efficient traffic handling, and reliable performance under varying workloads.
- Developed scalable Spring Boot microservices deployed on AWS (EC2, Auto Scaling, Load Balancers) for high availability and reliability.
- Implemented end-to-end testing with Cypress, ensuring stable releases and reduced production defects.
- Led code reviews and best practices adoption, improving code quality and team productivity.

Client: Hallmark Cards | Role: Java Full Stack Developer**April 2017 – June 2020**

Description: Built an image management platform enabling users to browse low-resolution assets and request high-resolution images, automating delivery workflows.

Responsibilities:

- Built **Java Spring Boot** microservices improving system reliability and inter-service communication.
- Developed responsive UI using **Angular** and **Bootstrap** for seamless user workflows.
- Deployed applications on **AWS** (EC2, S3, DynamoDB, Elastic Beanstalk) with Docker-based containerization.
- Optimized data persistence using **Hibernate** for efficient database interactions.
- Created **Python** scripts for asset processing, validation, and workflow automation.
- Integrated systems via **MuleSoft**, enabling seamless data exchange across platforms.
- Implemented **S3**-based secure image storage and delivery workflows.

Client: Denary Media | Role: Java Developer**May 15 – Dec 2016**

Description: Contributed to end-to-end development of web applications, supporting system design, development, testing, and maintenance activities.

Responsibilities:

- Designed application components and workflows, contributing to system analysis and solution design.
- Developed web interfaces using **HTML, CSS, JSP, and AJAX**, improving user interaction and usability.
- Implemented **Spring Security and OAuth2** for secure authentication and authorization.
- Integrated **Hibernate ORM** for efficient data persistence and database management.
- Built and consumed **RESTful and SOAP web services**, enabling seamless system integration and data exchange.
- Performed **system, functional, and integration testing**, ensuring application stability and reliability.
