SUMMARY

Java Full Stack Engineer with 3+ years of experience building scalable frontend and backend systems using TypeScript, JavaScript, React, Node.js, and AWS. Strong in API design, distributed systems, CI/CD, and production support, with a focus on performance and reliability. Experienced with modern TypeScript ecosystems and frontend tooling, as well as integrating LLM-based workflows including prompt engineering and RAG into production systems.

SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, Java, C#, Bash, PowerShell

Frontend: React, TypeScript, JavaScript, Angular, RxJS, reusable UI components, component-based architecture, state-driven UI patterns, multi-step workflows, responsive web applications, browser debugging, frontend performance optimization

Frontend Tooling: Webpack (configuration and optimization), module bundling, code splitting, tree shaking, asset optimization, build performance tuning

TypeScript: tsc (TypeScript compiler), strict typing, type inference, project configuration, large-scale TypeScript codebases

Backend: Node.js, Express, Spring Boot, Hibernate/JPA, microservices, distributed systems, backend service design, service-oriented architecture

API & Data: GraphQL, REST, Swagger/OpenAPI, API contract design, resolver integration patterns, pagination, caching strategies, authorization patterns, JSON-based service communication

AI / LLM: Prompt engineering, Retrieval-Augmented Generation (RAG), embedding-based retrieval, context management, semantic search workflows, AI-assisted product features

AI Platform: LLM evaluation strategies, response validation, guardrails, fallback mechanisms, prompt optimization, AI workflow observability

Cloud & Infrastructure: AWS (S3, Lambda, SQS, SNS, Glue, Athena, Redshift, EMR, Lake Formation), Azure, GCP, Docker, Kubernetes, Terraform, cloud-native development, serverless architecture

Data & Storage: PostgreSQL, NoSQL, data modeling, relational databases, query optimization, indexing strategies, distributed data access patterns

DevOps & CI/CD: GitHub Actions, Jenkins, Azure DevOps, Concourse, automated testing, release pipelines, continuous integration, continuous deployment

Testing & Quality: JUnit, Jest, Cypress, Selenium, Postman, unit testing, integration testing, API testing, contract validation, regression testing

Observability & Operations: Splunk, monitoring, alerting, production troubleshooting, dashboards, incident response, logging and operational visibility

Engineering Practices: Agile, SDLC, code reviews, technical documentation, cross-functional collaboration, system design, ownership mindset

Caching: Redis, caching strategies

EXPERIENCE

AMERICAN EXPRESS

Software Development Engineer

04/2025 – Present

- Led architecture and design decisions for scalable backend services, defining technical direction for distributed systems and aligning multiple services with long-term platform goals.
- Built and optimized backend systems using Java, Spring Boot, and AWS to ensure high availability, low latency, and fault-tolerant processing for high-volume production workflows.
- Re-architected synchronous systems into event-driven workflows using AWS Lambda, SQS, and SNS, improving system scalability, resilience, and failure isolation.
- Influenced cross-team technical decisions by collaborating with product managers and partner teams to define system design, APIs, and roadmap priorities.
- Designed and implemented GraphQL and REST APIs with strong focus on performance, authorization, caching strategies, and maintainable service contracts.
- Mentored engineers through code reviews, design discussions, and best practices, improving code quality and team productivity.

- Built observability solutions using Splunk dashboards, alerts, and log analysis, reducing incident resolution time and improving system reliability.
- Used AI-assisted and agentic coding tools to accelerate debugging, log analysis, and test generation, improving development speed and operational efficiency.
- Built and supported API integrations for SaaS-based systems, enabling reliable communication between internal services and external platforms
- Designed backend workflows handling transactional and subscription-like data models, ensuring consistency and scalability in high-volume systems
- Worked on systems aligned with billing and payment processing concepts, including event-driven transaction handling and reconciliation patterns
- Collaborated with product and business teams to evaluate technical decisions based on business impact, improving system efficiency and usability
- Developed backend components using C#/.NET and Java-based services in distributed cloud environments
- Worked on integrating LLM-driven workflows into backend systems, enabling intelligent processing of structured and unstructured data.
- Implemented prompt-driven workflows with validation and guardrails to ensure safe and reliable model outputs in production environments.
- Built RAG-style patterns by retrieving relevant data from external sources and injecting it into model context for improved response accuracy.
- Improved AI system reliability by handling edge cases, input variability, and fallback strategies for incomplete or noisy data.
- Added observability around AI workflows, including logging of model inputs/outputs and monitoring response quality.
- Explored agent-like patterns where model outputs drive downstream actions with controlled execution and safeguards.
- Collaborated with cross-functional teams to integrate AI features into existing systems and improve usability and performance.

Depository Trust & Clearing Corporation

Senior Software Engineer

05/2024 - 04/2025

- Supported systems programming labs using RISC-V assembly, C, and C++, covering instruction pipelines, memory layout, interrupts, and program execution flow.
- Assisted students in debugging low-level programs by analyzing register states, stack frames, and memory access patterns using RARS and C/C++ debugging tools.
- Developed and tested assembly routines to demonstrate register operations, stack management, and instruction execution, strengthening debugging and performance analysis skills.
- Developed Java and Spring MVC modules for post-trade clearing and settlement systems handling large batch transaction files with strict data integrity requirements.
- Assisted in designing service components that validated trade messages using XML/XSD schemas and performed data transformations for downstream processing.
- Created reusable DAO layers with Hibernate/JPA to interact with Oracle databases, optimizing SQL queries and indexing strategies for batch performance.
- Implemented unit tests and supported regression automation suites to validate trade lifecycle scenarios before UAT releases.
- Resolved application defects related to file parsing, transaction reconciliation, and data mismatches by debugging logs and reviewing database states.
- Worked in Agile teams using SVN/Git for version control, participating in sprint planning, story estimation, and daily stand-ups.
- Followed enterprise release management and change control processes, ensuring code deployments passed audit and compliance validations.
- Supported application monitoring and stability efforts by analyzing server logs and participating in production support rotations.

Cognizant Technology Solutions

Software Engineer

02/2022 - 09/2023

Project: ABB-EL CP

- Developed scalable backend services and enterprise application modules using Java, Spring Boot, JavaScript, and TypeScript in a production software delivery environment.
 - Designed and implemented GraphQL and REST services with emphasis on API usability, contract clarity, maintainable service integration, and secure communication patterns.
 - Contributed to backend systems with focus on reliability, maintainability, performance-conscious design, and clean service-oriented architecture.
 - Supported role-based access patterns, service validation, and controlled API access to strengthen secure application behavior.
 - Improved engineering quality through JUnit, Postman, Swagger/OpenAPI, and CI/CD workflows using Jenkins, Concourse, and Azure DevOps.
 - Used Splunk for production monitoring, issue troubleshooting, validation, and support across application and service layers.
-
- Contributed to defining backend architecture and service design patterns for enterprise applications, ensuring scalability, maintainability, and alignment across teams.
 - Developed backend services supporting enterprise SaaS-style applications, including API integrations and workflow automation
 - Worked with relational databases using SQL-based systems comparable to Microsoft SQL Server, focusing on performance and data integrity
 - Built APIs handling business-critical and financial data flows, improving reliability and traceability of system operations

Project: CCOE

- Built workflow-driven full-stack modules using Angular, Node.js, and Express to support business workflows, validation, CRUD operations, and user-facing functionality.
 - Developed reactive frontend experiences using RxJS and state-driven UI patterns, improving maintainability, usability, and flow consistency across complex application screens.
-
- Defined API contracts and service documentation using SwaggerHub and OpenAPI to strengthen frontend-backend collaboration and integration quality.
 - Implemented testing using Jest and JUnit to improve code quality, workflow validation, and release confidence.
 - Supported release engineering, monitoring, and Agile team delivery with strong focus on ownership, quality outcomes, and cross-team collaboration.
 - Contributed to data-intensive application flows handling structured and semi-structured payloads, aligning well with intelligent application backends and AI-integrated service patterns.
 - Contributed to backend systems supporting subscription-like workflows and structured business processes across applications
 - Implemented APIs and services aligned with modular SaaS architectures and scalable service integrations

EDUCATION AND TRAINING

MASTER OF SCIENCE: COMPUTER SCIENCE

Central Michigan University- Mount Pleasant, MI
