SUMMARY

Full Stack Developer with 4 years of experience in building scalable fintech applications using Java, Spring Boot, and Angular/React. Proficient in designing microservices architectures, optimizing system performance, and enhancing user experience. Skilled in AWS (EC2, S3, Lambda), relational and NoSQL databases (MySQL, MongoDB), and ORM tools like Hibernate to deliver robust, cloud-based solutions.

TECHNICAL SKILLS

Front-End Technologies:	HTML5, CSS3, Bootstrap, UI Material, JavaScript, Typescript, ES6, React JS, Redux, Angular
Back-End Technologies:	Core Java, Java 8, C++, Spring Boot, Spring MVC, Web Services, RESTful API, Microservices, Hibernate ORM, Streams, Lambda Functions
J2EE Technologies:	Servlets, JSP, JDBC, JMS, Maven, Multi-threading
IDEs:	Visual Studio Code, IntelliJ IDEA, Eclipse, Maven, Gradle, NetBeans
Web Services:	RESTful, SOAP
Databases:	SQL, MongoDB (NoSQL), PostgreSQL, MySQL, Oracle
CI/CD & Tools:	Jenkins, Code Ship
Testing tools:	JUnit, Mockito, React Testing Library, Jest
Cloud & Deployment:	AWS, Docker, Kubernetes,
Web Server:	Apache Tomcat, WebLogic
Other:	Agile, Jira, SVN, Ant, Scrum, GitHub, Bitbucket, Swagger Open API, SonarQube, POSTman
Operating System:	Windows, LINUX, Mac OS

EXPERIENCE

Full Stack Developer | Citi, NJ, USA

Feb 2024 – Current

- Designed **RESTful microservices** using **Java 11**, **Spring Boot**, **Spring Data JPA**, and **Spring Security**, enabling secure and modular banking functionalities across accounts, transactions, and user management.
- Developed dynamic and responsive **UI components** using **Angular 12**, **TypeScript**, and **Angular Material**, resulting in a **25%** improvement in page load performance and enhanced customer experience across web portals.
- Integrated **hybrid data storage** systems with **PostgreSQL** for transactional consistency and **Apache Cassandra** for high-throughput NoSQL data, optimizing backend data workflows and achieving sub-second query response times.
- Enhanced **API performance by 40%** through backend refactoring, cache layer integration, and database query optimization, reducing average API latency from **850ms to <500ms**.
- Utilized **AWS Lambda** for event-driven processing such as transaction notifications and background data processing tasks, **reducing processing time by 35% and improving system scalability for high-volume banking events**.
- Worked in **Agile Scrum teams** using **JIRA** for sprint planning, backlog refinement, and task tracking; participated in daily stand-ups, retrospectives, and bi-weekly demos with stakeholders.

Full Stack Developer | Cognizant, India

Oct 2020 – Dec 2022

- Developed frontend interfaces with **React**, **JavaScript (ES6+)**, **HTML5**, and **CSS3**, delivering interactive dashboards that improved user engagement metrics by over **22%**.
- Architected and maintained a multi-tenant system leveraging **Spring Security** and **OAuth 2.0 / OpenID Connect** for secure data segregation across 300+ clinics, ensuring compliance with healthcare data privacy and regulatory standards.
- Managed structured relational data storage with **MySQL** using advanced indexing and partitioning strategies, and integrated **Elasticsearch** for fast, scalable search and analytics queries on large datasets.
- Engineered event-driven communication pipelines using **Apache Kafka** and **RabbitMQ** for real-time streaming of notifications, audit logs, and asynchronous job processing, complemented by **Redis** caching for accelerated data access and queuing.
- Streamlined software quality and reliability by increasing unit and integration test coverage from **50% to 70%**, utilizing, **Mockito**, and **Cypress** for end-to-end testing.
- Created robust **RESTful APIs** using **Java 8**, and **JPA/Hibernate**, enabling efficient patient data ingestion, management, and processing for a multi-tenant healthcare analytics platform.
- Implemented **complex business logic** for patient data ingestion, processing, and validation, following clean code principles and **SOLID design patterns**, which improved backend reliability and reduced production issues by **30%**.
- Built **end-to-end CI/CD pipelines** using **GitHub Actions** and **Argo CD**, enabling fully automated code build, testing, containerization, and deployment workflows.

EDUCATION

Master of Science in Software Engineering – Stevens Institute of Technology, NJ, USA

Bachelor of Technology in Computer Science – Jawaharlal Nehru Technological University, Anantapur, India
