

# Jeevan Reddy Mallepally

## Full Stack Java Developer

Phone: (412)357- 4122

Email: jeevan.reddym29@gmail.com

---

### PROFESSIONAL SUMMARY:

- Over 7+ years of experience as a Java Full Stack Developer in the IT industry. Extensive experience in Software Analysis, Design, Development, Implementation and Testing of Object-Oriented Applications and web-based Enterprise Applications using Java/J2EE. Experience in design and development of software applications using J2ee, Servlets, JSP, Custom tags, JSTL, JavaBeans, JavaScript, HTML, CSS, jQuery, AJAX, and JSON.
- Proficient in Core Java, with strong expertise in multithreading, exception handling, collections framework, and object-oriented design principles. Experienced in designing reusable and modular utility classes to enhance code maintainability and reduce redundancy across services.
- Experienced in J2EE technologies, including Servlets, JSP, JDBC, JPA, EJB, JMS, and XML, with hands-on experience building robust, scalable enterprise applications and integrating data using JSON.
- Designed and developed cloud-native microservices using Spring Boot, Spring Cloud, and Spring MVC, integrating Spring Security and Spring AI for intelligent features like NLP and personalized recommendations, ensuring decoupled, scalable architectures.
- Hands-on experience in building and maintaining microservices-based architectures, ensuring independent deployment, scalability, and loose coupling between services. Skilled in decomposing monolithic systems into modular microservices, enabling faster feature releases and improved maintainability.
- Built scalable and secure RESTful, gRPC, and GraphQL APIs for enterprise applications, enabling seamless third-party integrations and low-latency communication.
- Integrated Hibernate and Spring Data JPA for efficient data access, transaction management, caching, and lazy loading.
- Proficient in deploying applications on Apache Tomcat, implementing MVC, ORM, IOC, and DAO patterns to build scalable, maintainable systems.
- Experience with messaging services including Apache Kafka, RabbitMQ, and JMS for scalable, fault-tolerant microservices communication.
- Skilled in application-level exception handling, structured logging with Log4j, SLF4J, and applying performance optimization techniques to ensure system availability, fault tolerance, and efficiency in production environments.
- Expertise in performance management, rapid prototyping, and scaling enterprise applications for high-throughput workloads.
- Proficient in Python and Node.js for developing automation tools, backend services, and data processing pipelines, utilizing libraries and frameworks such as Pandas, NumPy, Boto3, and Express.js to streamline workflows, integrate with cloud services, and handle large-scale data operations efficiently.
- Proficient in modern frontend development using React.js, Angular, JavaScript, TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap, AJAX, jQuery.
- Extensive hands-on experience with AWS services including VPC, EKS, RDS, S3, Elastic Load Balancing, RDS, DynamoDB, CloudWatch, CloudTrail, IAM, Lambda, API Gateway, CloudFormation, Terraform, SQS, Kinesis, Secrets Manager, and EC2 Auto Scaling for designing and managing cloud-based solutions.
- Skilled in building cloud-native applications, optimizing performance, ensuring high availability, security, and cost-efficiency in cloud environments.
- Expertise in Microservices developing SOA (Service Oriented Architecture) and J2EE Web Services based on SOAP, WSDL, UDDI, JAX-WS, JAXB, JAX-RPC using tools like Apache Axis.
- Hands-on experience with containerization using Docker to package and deploy applications as lightweight, portable containers, ensuring consistency across development and production environments.
- Skilled in orchestration with Kubernetes for managing containerized workloads, enabling automated scaling, selfhealing, and efficient resource utilization for high-availability, resilient deployments.
- Expertise in CI/CD automation using Jenkins, GitLab CI, Azure Pipelines, with Infrastructure as Code (Terraform) to build automated build, test, and deployment pipelines, ensuring consistency across environments.
- Strong understanding of system-level performance tuning, secure communication protocols (SSL/TLS), and Role-Based Access Control (RBAC) for securing cloud and hybrid systems.
- Proficient in architecting data solutions using relational databases like PostgreSQL, MySQL, and Oracle for database

design, complex SQL queries, stored procedures, and performance tuning, as well as NoSQL databases such as MongoDB, DynamoDB, CouchDB, and Cassandra to handle large-scale, unstructured data with high availability and scalability.

- Built ETL pipelines and data ingestion workflows using Snowpipe, Streams, and Tasks for real-time and batch processing, and integrated monitoring and alerting using Splunk and Datadog to ensure data pipeline reliability, performance visibility, and rapid issue resolution.
- Developed comprehensive unit and integration test suites using JUnit, Mockito, TestNG, and PyTest, applying Test-Driven Development (TDD) and Behavior-Driven Development (BDD) methodologies to validate business logic, mock external dependencies, and improve test coverage and application stability by 35% in Agile and Waterfall environments.
- Proven expertise in system analysis, design, and implementation, delivering robust, scalable, and maintainable enterprise applications by translating complex business requirements into efficient technical solutions.
- Utilized company-approved Generative AI tools and Large Language Models (LLMs) to optimize development workflows, improve design efficiency, and integrate AI/ML-driven features such as NLP, intelligent recommendations, and predictive analytics into enterprise applications.
- Proficient in Programming with Application Software Development in IT industry and dynamic experience in Software Development Life Cycle including requirement gathering, designing, programming, testing and implementation of major Systems and Software development OOA & OOD.
- Strong foundation in Data Structures and Algorithms, enabling efficient problem-solving and system design in high-performance applications.
- Experience with Git, GitLab, Bitbucket for version control; Jira for task tracking; and Slack for team collaboration.
- Mentored peers and contributed to team-wide best practices in fast-paced Agile environments.

#### TECHNICAL SKILLS:

**Programming:** Java, C, C++, PL/SQL, .Net

**IDE:** Eclipse, IntelliJ, NetBeans, IBM Rational Application Developer (RAD), Visual studio

**Scripting:** jQuery, JavaScript, Shell Script, Python

**J2EE Technologies:** Servlets, JSP, JNDI, JDBC, Struts, JMS, Java Beans, Transaction Management, Resource Connections, Security, Spring, Hibernate JAX RPC, JAX-RS, JAX-WS, SOAP, REST, WSDL, XML over HTTP, Apache CXF, JAX-B, XSD and RESTFUL

**Frameworks:** Spring, Struts, Hibernate

**Spring Frameworks:** Spring Core, Spring DAO, Spring AOP, Spring MVC, Spring Boot, Spring RMI, Spring Web, Spring IOC, Spring JDBC, Spring ORM and Spring JMS

**Web Technologies:** CSS/CSS3, Java Script, jQuery, HTML/HTML5, DHTML, JSON, Bootstrap, Typescript

**JS Frameworks:** Angular, React and Node

**Database:** MS SQL, MS Access, PostgreSQL, Cassandra, Mongo DB, Oracle.

**Application Servers:** Apache Tomcat, JBOSS, WebSphere

**Cloud Technologies and DevOps tools:** AWS, PCF, EC2, EBS, S3, Docker, ECS, EKS, SQS, RDS, S3, Glacier, Lambda, Kubernetes

**Tools and Technologies:** Maven, ANT, Rally, JIRA, GIT, Bit-Buckets.

**Operating systems:** Windows (XP, 7, 8/8.1, 10), Linux, Unix, MA-OS 10.13.2

#### PROFESSIONAL EXPERIENCE:

**Client:** Wintrust, Chicago, IL

**Apr 2023-Present**

**Role:** Sr. Full Stack Java Developer

- Developed and optimized key banking features, building dynamic and responsive user interfaces using Angular 17+, Next.js, TypeScript, HTML5, CSS3, and Bootstrap.
- Leveraged Angular Router for seamless client-side routing across banking dashboards and integrated REST and GraphQL APIs efficiently using Angular's HttpClientModule and Apollo Client.
- Developed enterprise-grade financial applications using Java 17+, Spring Boot, Hibernate, Spring JDBC, Spring Annotations, Spring AOP, Spring Integration, and RESTful web services, enhancing system scalability and improving development efficiency by 45% through optimized backend services and modular, maintainable code structures.

- Designed and implemented scalable RESTful and GraphQL APIs with clear endpoint structuring, proper HTTP status handling, and schema-driven data querying, ensuring seamless communication between frontend and backend services.
- Developed robust authentication and authorization services using Spring Security, OAuth2, and JWT, enabling Single Sign-On (SSO) and token-based authentication across microservices, significantly enhancing security and reducing authentication latency.
- Implemented Spring Cloud components like Eureka, Feign Clients, and Config Server for service discovery, inter-service communication, and centralized configuration.
- Integrated third-party payment gateways and implemented transaction validation, achieving 99.9% uptime. Led the migration of legacy systems to a microservices architecture, resulting in a 30% reduction in operational costs.
- Led development across business logic (using JBoss Rules Engine), UI components, reporting modules, streamlining coordination and reducing delivery timelines by 20% while ensuring high-quality deliverables.
- Designed and optimized complex SQL queries, stored procedures, and PL/SQL packages in MySQL to support core financial operations, leveraging Hibernate and JDBC for relational data persistence, and integrated MongoDB via Spring Data MongoDB for managing unstructured, high-volume NoSQL data.
- Wrote ETL pipelines using Java 17+ and Node.js to extract data from external APIs and legacy systems, transform and normalize it, and load into target databases for analytics/reporting.
- Utilized Java 17 features like Records, Sealed Classes, and Pattern Matching to write cleaner, more maintainable code and reduce boilerplate across service layers.
- Leveraged Scala in batch processing and data transformation pipelines to simplify concurrency and enhance functional programming efficiency.
- Implemented Kafka-based streaming with Kafka producers/consumers to process real-time banking transactions like deposits and loan updates, and integrated IBM MQ for secure, reliable, and asynchronous messaging between core banking systems and external services.
- Designed event-driven workflows with SQS, SNS, and AWS Lambda for asynchronous processing, real-time alerts, and automated responses, boosting responsiveness in high-volume transactional systems.
- Deployed cloud-native applications on AWS using EC2, S3, RDS, DynamoDB, Lambda, Redshift, and IAM ensuring high availability, fault tolerance, and cost-efficient scalability. Used Terraform to provision and manage AWS infrastructure as code for consistent and automated deployments.
- Containerized applications using Docker and orchestrated scalable, production-ready deployments with Kubernetes (K8s) and OpenShift, ensuring consistency across development, testing, and production environments.
- Built and managed CI/CD pipelines with Jenkins, GitLab, AWS CodePipeline, and CodeDeploy, integrating OpenShift pipelines to automate container builds, testing, and deployments, accelerating releases and reducing manual intervention.
- Developed and maintained automated deployment scripts using Automagic (UC4) to streamline code delivery across multiple production environments, reducing manual effort and ensuring consistent, reliable releases.
- Wrote unit and integration tests using JUnit and Mockito, ensuring test coverage and application stability across modules.
- Performed continuous static code analysis using SonarQube, enforced coding standards through peer reviews, and reduced technical debt.
- Created and maintained batch jobs using Autosys with UNIX shell scripting, Core Java, and SQL invoker to automate backend banking workflows like reconciliation, end-of-day reporting, and scheduled data ingestion across multiple environments.
- Implemented real-time log aggregation and monitoring using Splunk and the ELK Stack (Elasticsearch, Logstash, Kibana), which significantly improved issue detection and troubleshooting across distributed systems.
- Leveraged Prometheus for visualizing application performance and infrastructure metrics, providing real-time insights and enabling proactive system optimizations.
- Followed Agile and Scrum methodologies, participated in sprint planning, daily stand-ups, and retrospectives to deliver high-quality, iterative software solutions efficiently and collaboratively.

- Contributed to all phases of the Software Development Life Cycle (SDLC), including requirements gathering, analysis, design, development, and testing, following Agile Scrum methodology for faster and more iterative project delivery.
- Used Git for version control, managing feature branches, resolving merge conflicts, and enabling team collaboration through structured pull request reviews.

**Client: Home site insurance, Boston, MA**

**Oct 2020-Mar2023**

**Role: Full Stack Java Developer**

**Responsibilities:**

- The application is built on Microservices Oriented Architecture using MEAN (MongoDB, Express JS, Angular and Node.js 12) stack and developed Responsive Single Page Applications (SPA).
- The application is built on Microservices Oriented Architecture using MEAN (MongoDB, Express JS, Angular and Node.js 12) stack and developed Responsive Single Page Applications (SPA).
- Designed and developed dynamic, responsive web applications using Angular, TypeScript, JavaScript, HTML5, and CSS3 in Visual Studio Code, integrating with backend services through JSON for seamless data handling.
- Contributed to RESTful API integration with Angular, Spring MVC, and Spring Boot, ensuring secure and efficient data flow to web applications and patient-facing portals.
- Implemented core Java concepts such as Collections, Multithreading, Data Structures, and Exception Handling to enhance application performance and ensure robust and error-free execution.
- Applied Dependency Injection (DI) and Inversion of Control (IoC) principles within the Spring framework, improving code modularity and managing bean lifecycle efficiently.
- Designed and developed RESTful and SOAP web services for backend communication, ensuring smooth data exchange between microservices and external systems, including Spring MVC and Spring Boot for efficient API management.
- Built event-driven services using Apache Kafka and ActiveMQ, enabling asynchronous processing, improving responsiveness, and handling high-volume transactions in real-time.
- Secured APIs and services using Spring Security, implementing JWT-based authentication, OAuth2, and LDAP-based enterprise user authentication to enforce role-based access control and enhance system security.
- Developed backend services using Java 8, applying Lambda expressions, Streams API, and Functional Interfaces to write clean, maintainable, and efficient code.
- Designed new components to integrate with existing architecture using Core Java by implementing multithreading and design patterns such as Factory Method, Abstract Factory, and Singleton to enhance functionality.
- Leveraged design patterns like MVC, DAO, and DTO to structure scalable, maintainable, and modular code, enhancing service layers and ensuring smooth integration.
- Integrated Spring Data JPA with PostgreSQL for structured relational data and CouchDB for high-volume NoSQL data, improving performance and supporting real-time healthcare transactions.
- Implemented Hibernate ORM and built the data access layer using POJOs and Spring Data JPA to manage relational data efficiently.
- Implemented backend services to handle HTTP requests and responses, supporting full CRUD operations via RESTful web services (POST, PUT, DELETE, GET), ensuring efficient communication between frontend applications and external systems.
- Wrote unit and integration tests using JUnit, Mockito, and TestNG while following Test-Driven Development (TDD) practices to ensure high-quality, stable, and secure backend services.
- Implemented CI/CD pipelines using Jenkins, GitLab, SonarQube, and Maven while integrating monitoring, logging, and alerting systems to maintain application health, automate deployments, and improve release cycles.
- Deployed applications on AWS using EC2, Elastic Beanstalk, S3, RDS, DynamoDB, CloudWatch, and CloudTrail, ensuring scalability, fault tolerance, and compliance with healthcare regulations.
- Utilized version control with Git and GitHub, managing feature branches, pull requests, and ensuring team collaboration through structured code reviews and merge strategies.
- Collaborated with cross-functional teams to integrate external APIs, third-party systems, and optimize service interoperability and data accuracy across platforms.

- Designed and implemented multithreaded components for concurrent processing and optimized search operations, enhancing application performance and scalability.
- Designed, analyzed, and developed front-end and back-end components using Servlets, Bootstrap, HTML5, CSS3, AngularJS, TypeScript, EmberJS, and AJAX for developing presentation layers.
- Integrated Fisheye/Crucible with JIRA and Bamboo for issue tracking and continuous integration while ensuring smooth communication between Java and .NET components when required.
- Set up monitoring and optimized AWS resources, diagnosing application and infrastructure issues while maintaining cost efficiency and performance.
- Implemented security best practices in CI/CD pipelines and documented infrastructure configurations to ensure compliance with organizational and industry standards.
- Used Angular Internationalization (i18n) to support multilingual applications and enhance global usability.
- Composed and executed MongoDB queries to retrieve JSON data while developing server-side applications using NodeJS, ExpressJS, MongoDB, and MongooseJS.
- Created Amazon EC2 and Pivotal Cloud Foundry instances and deployed applications in hybrid cloud environments.
- Designed and developed Enterprise Eligibility business objects and domain objects using Hibernate ORM frameworks.
- Migrated IBM MQ messaging modules to Apache Kafka and created Kafka adapters to decouple application dependencies.
- Developed automated test cases using Jasmine and Karma for Angular applications and Mocha and Chai for React testing frameworks.
- Used Docker containers to deploy applications across hybrid cloud environments, improving scalability, collaboration, and deployment consistency.

**Client: Catholic Health, Denver, CO**

**Jan 2018- Sep 2020**

**Role: J2EE/Java Developer**

- Involved in all phases of the **Software Development Life Cycle (SDLC)** following Agile & Scrum methodology, participating in sprint planning, daily standups, reviews, and retrospectives using Jira.
- Developed responsive **Single Page Applications (SPA)** using HTML5, CSS3, JavaScript, ReactJS, AngularJS, jQuery, AJAX, and JSON to build dynamic and user-friendly interfaces.
- Designed and implemented **RESTful web services** using Spring MVC and integrated backend services with front-end applications.
- Built reusable TypeScript components and implemented template-driven and reactive forms with client-side and server-side validations.
- Developed and deployed **Microservices-based architecture** on AWS, ensuring scalability, modularity, and high availability.
- Containerized microservices using Docker and implemented CI/CD pipelines using Jenkins for automated build and deployment processes.
- Performed unit and integration testing using JUnit and Mockito; developed automation test scripts using Selenium and Cucumber.
- Managed project builds and dependencies using Maven and maintained version control using Git; implemented logging using Log4j2.
- Integrated JSON and XML-based APIs, handled data flow, API calls, and error validations to ensure seamless system communication

#### **Certifications:**

AWS Certified Developer Associate

Microsoft Certified: Azure Fundamentals [AZ900]

PEGA-certified Decisioning Consultant [PCDC 8.6]

#### **EDUCATION DETAILS:**

Masters - University of New Haven

Bachelor's degree- Osmania University
