

GRANDHI VENKATESH

(361) 355-0855 | venkateshgrandhi125@gmail.com | Nashville, TN

PROFESSIONAL SUMMARY

Results-driven full stack Developer and Cloud Engineer with 6+ years of experience specializing in distributed systems, high-performance microservices, and scalable cloud-native architectures. Proven expertise in Java, Golang, Python, Spring Boot, and Kafka with deep hands-on delivery across OCI and AWS — including observability pipelines, security-hardened API infrastructure, automated canary monitoring, and Terraform IaC. Adept at driving operational excellence through automation, security enforcement, and cross-functional collaboration across telecom, airline, healthcare, and cloud domains. AWS Certified Cloud Practitioner and OCI Foundations Associate. M.S. Computer Science — Texas A&M Kingsville (GPA 3.8).

KEY ACHIEVEMENTS

- **Oracle OCI:** Architected and delivered distributed cloud services on OCI using Java, Golang, Python, and Terraform; improved deployment reliability and reduced incident response times by 30% across multi-region networking infrastructure.
- **Limit Monitoring & Firewall Automation / Oracle OCI:** Designed a scheduled polling architecture to monitor OCI Network Firewall and Firewall Policy limits across tenancies — pushing custom metrics to OCI Telemetry and automating proactive alerting via alarms and notifications to prevent resource exhaustion before customer impact.
- **Ericsson / TCS:** Delivered Spring Boot microservices for a 2G–5G network management platform integrating Kafka and AWS EKS; reduced deployment cycle time by 25% across signal tracking modules.
- **Cathay Pacific / Infosys:** Built airline booking workflows with React and Spring Boot microservices; reduced frontend page load times by 20% through lazy loading and memoization; cut release cycles by 30%.
- **Healthcare Platform / Wipro:** Architected HIPAA-compliant Spring Boot microservices for patient records on GCP/GKE; implemented encryption and IAM access controls ensuring zero compliance violations.

PROFESSIONAL EXPERIENCE

Oracle

June 2025 – April 2026

Senior Member of Technical Staff — OCI Backend & Cloud Engineering | Team Size: 13

- Built and maintained large-scale distributed cloud services on OCI using Java, Golang, Python, and Terraform — enhancing reliability and automation across core networking infrastructure for multi-tenant enterprise workloads, reducing incident response times by 30%.
- Delivered end-to-end observability across 5 core services by instrumenting custom OCI Telemetry metrics and Grafana dashboards — improving issue detection speed by 40% and enabling real-time visualization of latency, throughput, and application health across all environments.
- Implemented automated Canaries test suite for continuous API monitoring with multi-channel alerting (PagerDuty, Slack) — detecting regressions before customer impact and reducing production incidents by 35%; enforced code quality via JaCoCo 80% coverage threshold.
- Designed a security-first API flow managing OCI firewall rules and IAM-based access controls across microservices — protecting customer PII data, reducing API latency by 25%, and ensuring compliance with Oracle cloud security standards across staging, pre-prod, and production.
- Created an advanced Python build pipeline and led end-to-end onboarding of a new service repository — automating build orchestration and deployment packaging while managing zero-downtime multi-region releases via Terraform IaC and Shepherd canary pipelines.
- Designed and implemented a limit monitoring architecture for OCI Network Firewall and Firewall Policy limits — deployed a scheduled poller across tenancies to push custom metrics to OCI Telemetry and configured proactive alerting via alarms and notifications, enabling early detection of resource exhaustion before customer impact.

Tata Consultancy Services (TCS) — Client: Ericsson

Sept 2021 – July 2022

Java Full Stack Developer — Telecom Network Management (2G/3G/4G/5G)

- Designed and developed RESTful microservices using Spring Boot to modularize user management, network configuration, and signal tracking — reducing deployment cycle time by 25% and improving service scalability across a telecom-grade cellular management platform.
- Deployed microservices on AWS EKS with Docker; integrated Kafka and RabbitMQ for asynchronous event-driven communication across alerting, logging, and signal update modules.
- Implemented Spring Security with OAuth 2.0 token-based authentication; optimized Oracle DB with advanced indexing and Spring Data JPA, improving query performance by 20% across high-volume network configuration and user profile datasets.
- Built Angular-based UI components for network diagnostics, live signal analytics, and operational dashboards; managed CI/CD pipelines via Jenkins and GitLab with Terraform IaC for AWS, GCP, and Azure resource provisioning.

Infosys — Client: Cathay Pacific

June 2019 – Aug 2021

Full Stack Java Developer — Airline Operations & Booking Platform

- Developed Spring Boot RESTful APIs for booking, user management, and flight status workflows; built React.js UI with lazy loading, code splitting, and memoization — reducing page load times by 20% and improving customer experience across booking modules.

- Implemented microservices architecture modularizing booking, user, and backend processing services for independent deployment; designed Oracle DB stored procedures and Spring Data JPA repositories, improving data retrieval efficiency for high-volume airline transactions.
- Integrated AJAX and Axios into React components for dynamic retrieval of booking information, user profiles, and flight statuses; applied React.memo and useMemo to reduce unnecessary re-renders and optimize frontend responsiveness under concurrent user load.
- Built CI/CD pipelines using Jenkins and GitHub Actions; provisioned infrastructure with Terraform; collaborated with DevOps teams to automate builds and deployments, cutting release cycles by 30% and ensuring zero-downtime production rollouts.

Wipro — Client: Braidwood

July 2017 – June 2019

Full Stack Developer — HIPAA-Compliant Healthcare Management System

- Developed Spring Boot microservices for patient records, medical histories, prescriptions, and drug inventory — implementing HIPAA/PII-compliant data handling with encryption, role-based access controls, and audit logging across all critical healthcare modules.
- Deployed containerized microservices on GCP using Google Kubernetes Engine (GKE); configured Cloud Compute Engine instances for scalable hosting and managed patient records in Cloud Storage.
- Built Angular 8/10 UI modules for patient registration and medical record management; optimized Oracle DB schema for largescale data; implemented Kafka and Spring JMS for real-time asynchronous messaging between microservices.
- Developed comprehensive unit and integration tests using JUnit and Mockito; automated CI/CD via Jenkins and Google Cloud Build, improving release reliability by 15%.

Intellent

Aug 2016 – July 2017

Java Developer — Insurance Policy Management Platform

- Designed and implemented backend modules for insurance plan enrollment, premium calculation, and policy tracking using Java, Spring Boot, and RESTful APIs; leveraged Java 8 Stream and Lambda API for high-performance bulk data operations on policy collections.
- Integrated Kafka-based messaging pipelines for real-time asynchronous communication between microservices, supporting high-throughput data processing with low latency for policy events and user activity tracking.
- Implemented Spring Security for authentication and authorization; wrote BDD test scenarios using Cucumber and JUnit; deployed on JBoss with Maven build automation and Log4j logging.

NOTABLE PROJECTS

OCI Canaries — Automated API Health Monitoring

Tech: Golang, Java, OCI Vault, Instance Principal Auth, Grafana

- Built a Golang/Java canary system with OCI Vault integration and exponential backoff — deployed across 3 OCI regions, reducing incident detection time by 35% with proactive PagerDuty and Slack alerting before any customer-facing impact.

Security Firewall & Observability Automation

Tech: Python, Terraform, OCI Telemetry, Prometheus, Grafana, Confluence REST API

- Built a Python pipeline parsing Jira tickets, generating Terraform HCL configs, and updating Confluence in real time — cutting firewall deployment from hours to minutes; architected observability across 5 microservices with PromQL Grafana dashboards, reducing MTTD by 40%.

AI-Powered Engineering Chatbot & Incident Automation

Tech: Python, LLM, OCI, RAG, Confluence REST API, Terraform, Bash/Shell Scripting

- Built an AI chatbot that ingests and indexes all project design documents and API specifications using a RAG pipeline — enabling engineers to query documentation in natural language and instantly retrieve relevant design context, API details, and troubleshooting guidance; integrated automated team notifications on service failures and dynamic runbook generation from issue descriptions, reducing incident resolution time and eliminating manual documentation lookup across the team.

TECHNICAL SKILLS

Languages: Java (8, 11, 17, 21), Golang, Python, JavaScript (ES6+), SQL, Bash/Shell

Backend: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Spring Cloud, Spring Batch, Hibernate, Micronaut, RESTful APIs, Microservices Architecture, OAuth 2.0

Frontend: React.js, Angular (8, 10, 15), HTML5, CSS3, JavaScript

Cloud & DevOps: OCI (Functions, Monitoring, OKE, APM, Vault, Networking), AWS (EKS, EC2, S3, SNS, CloudWatch), Azure (AKS, App Services), GCP (GKE, Compute Engine), Terraform (IaC), Docker, Kubernetes, Jenkins, Shepherd

Messaging: Apache Kafka, RabbitMQ, ActiveMQ, IBM MQ, Spring JMS

Databases: Oracle DB, MySQL, PostgreSQL, MongoDB, Cassandra, AWS DynamoDB

Observability: Grafana, Prometheus, PromQL, OCI Telemetry, OCI APM, AWS CloudWatch, PagerDuty

Tools: Git, GitLab, JIRA, Confluence, IntelliJ IDEA, VS Code, Maven, Gradle, Postman, Swagger

Methodologies: Agile/Scrum, TDD, BDD, HIPAA/PII Compliance, Disaster Recovery Planning

EDUCATION

Master of Science in Computer Science — Texas A&M University Kingsville

GPA: 3.8 / 4.0 | 2022 – May 2024 | Coursework: Distributed Systems, Cloud Computing, Advanced Algorithms, Database Management, Machine Learning

Bachelor of Technology in Electrical & Electronics Engineering — VITS College of Engineering

GPA: 3.8 / 4.0 | 2012 – 2016 | Coursework: Data Structures, OOP, Computer Networks, Operating Systems, Embedded Systems

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- Oracle Cloud Infrastructure Foundations Associate (OCI)
